

Git

It's a Version control is a version control software for developers, it helps save and keep track of the changes for a file or a group of files. This enables developers to keep track of what has been done and return to a previous phase if they decide they want to revert some of the changes they've made.

GitHub

It's a hosting service platform that can hold repositories of code in cloud-based storage so that multiple developers can work on a single project and see each other's edits in real-time, and it can be used for cloud saving of files to keep it save from loss or share it with other people.

GitHub pages

It's a deployment service that allows users to host and share their static front-end websites that uses HTML, CSS and JAVASCRIPT and stored as repository on GitHub.

GitHub desktop

It's a desktop application with a graphical user interface (GUI), that enables users to interact with git and GitHub without using a browser or writing git commands, such as repository creation, pull requests, and commits with just a simple click.
